

Mr. Foster,

I took a 3-day auto cad introduction class from you at your home last December, 2003. The knowledge acquired from the class was immeasurable for my work and personal life. I use AutoCAD almost daily at work, or home in my personal life. My son is 28, had auto cad in high school & a four year degree in surveying from UAA, and says I know more about windows AutoCAD than he does. The only thing I regret is I did not retain your filters, nor have taken the time to figure out how to acquire the ability to set them up and use them. When I am entertaining myself I study the auto cad bible and try to progress. I will eventually take another class on my own to acquire some 3D knowledge as it intrigues me.

My supervisor wants me to ask you if there is a yearly update or anything we could or should obtain from AutoCAD to keep our software current?
